Curbside waste & recycling collection with
AUTOMATIC SIDE LOAD (ASL)

WHAT IS ASL SERVICE?

Our ASL service utilizes 95-gallon/ 64-gallon toters (wheeled carts with lids). The toters are picked up by our specially equipped truck with a mechanical arm, making the process faster and safer.

WHAT TO KNOW ON COLLECTION DAY

Please follow these ASL rules:

- Place your garbage curbside the evening before your collection day. Routes operate between 5:00 a.m. and 7:00 p.m., so having them ready ensures you won't miss pickup
- Roll the cart to the street and place behind the curbline.
- All trash and recycling material must be inside the designated carts. No material left on the ground or next to the cart will be picked up by the ASL vehicle.
- Never place batteries, mercury-containing products, paint, chemicals, motor oil, tires, appliances, electronics, or other hazardous waste in your curbside container. Use approved recycling or disposal programs in your community.
- The cart must be accessible from the street i.e. not placed behind a parked vehicle or down a driveway.
- The ASL vehicle needs a minimum of 4 feet clearance on both sides of the cart i.e. 4 ft away from your mailbox, driveway pillars, any trees, etc. Please leave approximately 3 feet between each cart.
- Place the cart at the curbline with the silver pick-up bar on the front of the cart facing the street and the wheels facing your home.

Need extra capacity or a bulk pickup?
